Release Notes

MacroView

System   Advanced Office Integration

Release   AOI Client 6.2 / UDN Server 6.0

Date   November 2020

What's new in this release?

- Support for Modern Authentication on SharePoint Online (Office 365). When using MacroView DMF or Message 8.5 or later with Modern Authentication enabled, UDN will utilise the DMF or Message credentials eliminating additional authentication requests.

AOI Client 6.2.14 (November 2020)

- Fixed an issue where Word would crash on an exit.

AOI Client 6.2.13 (September 2020)

- Initial version comments are now captured when DMF 'PromptVersionComments' setting is enabled (Excel)

AOI Client 6.2.12 (July 2020)

- .NET Framework prerequisite updated to .NET 4.7.2
- Added other language and localisation support See more…

AOI Client 6.2.10 (April 2020)

- When the *Disable auto checkout on open* setting in MacroView DMF is checked, new documents saved using 'Save As to SharePoint' are not checked out.

AOI Client 6.2.08 (March 2020)

- Option to prevent users overwriting versions of a document saved by another user. See more…
- Increased control over the placement of the document reference in document footers. See more…

AOI Client 6.2.02 (October 2019)

- The "Discard All changes" button now displays correctly after a save. The button reflects the state of the document if changes have been made.

UDN Server 6.0.2 (March 2019)

- Allows service instance to run for any server role

AOI Client 6.2.01 (November 2018)

- Support for Modern Authentication on SharePoint Online (Office 365). When using MacroView DMF or Message 8.5 or later with Modern Authentication enabled, UDN will utilise the DMF or Message credentials eliminating additional authentication requests.

- Resolves an issue with documents remaining locked after being saved as a new document in required checkout libraries (#23164).

- Resolves an issue with the footer and window caption not updating to display UDN information when opening older format XLS files from required checkout libraries on SharePoint Online (Office 365) (#22984).

- Resolves an issue with AOI/UDN not functioning when opening documents from SharePoint Online (Office 365) containing a hash symbol in its URL (#22987).
